MEMORANDUM FOR: [REDACTED] AD/CS

25X1A1a

At our 4 June meeting I was glad to commit OBI to cooperating fully in soonest initiation of EPIC in processing of the NIS within PSD, in making OBI technical manhours available to further the project, and in stimulating NIS contributors to utilize tape instead of typed production as soon as this would be more feasible as a general procedure than was agreed to be the case at the present time. I gathered that OCS and PSD were prepared to proceed under these terms of reference rather than on the basis of the 4 May Draft, which includes the statement that NIS composition alone costs [REDACTED], puts more emphasis on general producer conversion to taping than seems requisite in view of the significant economies PSD foresees within its own operations, and implies that OBI might meet some of the cost of providing NIS producers with taping equipment. I feel the 9 June memo for the record should show that OBI essentially accepted PSD/OCS statements as to feasibility and potential economies in this proposed PSD processing of NIS material as it is now being forwarded to PSD.

25

I am returning herewith the 4 May Draft which you might want to adjust if you feel a concurred-in paper is required, and copy of the Record memo which I feel should more clearly bring out the points noted above.
